Noura Valley Hospital

OB/GYN Cybersecurity Evidence Summary — SIMULATED

Assessment scope

OB/GYN electronic health record, scheduling, clinical workstations, staff identities, backup and monitoring controls.

Evidence collection date

21 October 2026. Evidence is fictional and deliberately contains both strengths and weaknesses.

Systems in scope

OBG-EHR, Fetal-Monitor-Archive, OBG-Scheduling, Ultrasound-Reports, and associated identity/monitoring services.

Known review items

Leaver account status, privileged multi-factor authentication, quarterly access certification, incomplete monitoring, failed backup job and overdue procedure review.

Assessor instruction

Use source documents to distinguish written policy from implemented safeguards. Do not infer a regulatory compliance verdict from a single artifact.
